The National Aeronautics and Space Administration (NASA) and Center for Pollution Prevention (C3P) are holding an International Workshop on Environment and Alternative Energy with the support of GE Global Research - Europe. The workshop will take place on November 10-12 in Munich, Germany. An exciting program is being planned that will include presentations and break-out sessions on the issues, progress, and technological solutions (from R&D to commercial) with a view toward collaboration. Of particular interest will be technologies applicable to infrastructure, aerospace operations, and defense, including:

- Renewable and alternative energy technologies and systems
 - Wind
 - Solar
 - Geo-thermal
 - Wave
 - Hydrogen and fuel cells
- Adaptive response to climate change
- Materials management and substitution
 - Bio-based products
 - Alternative cleaners
 - Alternative coatings and pretreatments
 - Alternative coating removal technologies
- Recycling and pollution control strategies
 - Cleaning
 - Coatings and pretreatment
 - De-painting
 - Solvent reduction and recovery
- Electronics manufacturing, repair and e-waste recovery
- Remediation and cleanup
- Encroachment risk mitigation

Do not miss this opportunity to hear distinguished guest speakers and workshop leaders present a wealth of information and ideas relevant to European and U.S. engineers and scientists interested in solving their environment and energy problems.

Who should attend?

This workshop will be geared toward scientists, engineers, academics, and students from around the globe affiliated with government agencies, universities, as well as large and small businesses.

Workshop information and registration

The workshop will take place in Munich, Germany. Space is limited and registration **is required**. The registration website will become available June 2009.
