

# 2010 INTERNATIONAL WORKSHOP ON ENVIRONMENT AND ENERGY

“Global Collaboration in Sustainable Environmental and Alternative Energy Strategies”

San Diego, California | November 2 - 4, 2010

## Mark Your Calendars!

The National Aeronautics and Space Administration (NASA) and Portuguese Center for Pollution Prevention (C3P) are holding an International Workshop on Environment and Energy November 2 – 4, 2010 at the University of California San Diego, Jacobs School of Engineering. An exciting program is being planned that will include presentations on current issues, progress on those issues, and technological solutions, from research and development to commercially available technologies, with a view toward collaboration.

**Of particular interest will be technologies applicable to infrastructure, aerospace operations, and defense, including:**

- Materials management and substitution
- Remediation technologies and strategies
- Emerging renewable and alternative energy technologies
- Encroachment risk analysis and mitigation
- Adaptive response to climate change
- Green sustainable development and redevelopment
- Recycling and pollution control strategies
- Student presentations on related international and domestic research

Do not miss this opportunity to hear distinguished international and U.S. guest speakers, workshop leaders, and students present information and ideas relevant to European and U.S. engineers and scientists interested in solving their environment and energy issues.

## Who should attend?

This workshop will be geared toward international and U.S. scientists, engineers, academics, and students from around the globe affiliated with government agencies, universities, as well as large and small businesses. Especially welcome are UCSD students and faculty.

## Workshop Registration

Although there is no cost for the workshop, **registration is required.**
